Our Aims

We aim:

- To inform farmers of the environmental impact and help them become more eco-friendly.
- To find a good balance between the need for food production and the preservation of the ecological system within the environment.
- To minimize the use of those non-renewable inputs that cause harm to the environment or to the health of farmers and consumers, and to make productive use of the knowledge and skills of farmers.
- To focus on producing long-term crops and livestock while having minimal effects on the environment.

Introduction

Agrico is a non-profitable website where all funds go from the farmers to the farmers. We have created this website to support farmers, we try to provide them with the best affordable alternatives to harmful chemical substances. In agriculture, the main problem is its climatic effect, while it provides us with an abundance of crops, it causes a lot of damage to the environment. We would like to redefine agriculture by making it more eco-friendly and more progressive. In rural areas, where most occupations are that of farmers, there is a negligence of agricultural technology which makes it hard for agriculture industry to progress.

Agrico's features

How we help the farmers

Agriculture is responsible for a major portion of the greenhouse gas (GHG) emissions that cause climate change, accounting for 17 percent of GHG emissions directly from agricultural activities and another 7-14 percent from land use changes.

Agricultural Loans

SUMMARY

- Agricultural loans are availed by a farmer to fund seasonal agricultural operations or related activities like animal farming, pisci-culture or purchase of land or agricultural tools.
- This type of loan also helps buying inputs such as fertilizers, seeds, insecticides etc. and engaging labour for cultivating and harvesting the crops.
- In addition, purchasing of land, or purchasing of agricultural tools, storage of produce and transport, cost of ploughing land for sowing, weeding, and transplantation also are included under purview of agricultural loans.
- Farmers can avail an agricultural loan starting at 7% p.a. and with processing fee ranging between zero to 4% of the loan amount.

BANKS

- State Bank of India (SBI) is the market leader when it comes to agriculture-related financing. It has a wide network of branches spread across the country and offers financing facility to nearly 1.01 crore farmers. SBI offers a whole range of services to facilitate agriculture and allied activities.

Donations

TECHNOLOGY AND RESOURCES

- Donating forms of agricultural technology and resources would help progress the industry in rural areas, depending on the technology. This could positively affect the country's economy, the rural population, the agricultural industry and the environment.

ADVICE

- One of our main goals is to inform them about things that haven't been addressed in rural areas such as the environmental impact. This is not a conventional donation yet this would greatly help those who haven't been properly educated in the field at the price of nothing.

FUNDS

- Providing funds would help farmers grow substantially. This money would help them get the personalised help they need. It would go towards something that would make sure that the crops grow and remain healthy.

Help

SUMMARY

We have a chat box feature in which citizens in the industry can address their concerns and we will help them if it is within our reach. E.g. If they need resources we will find willing donators.

Agrico.

We mainly provide information to farmers which is something they lack in rural areas. We inform them about the effect of pesticides and specific fertilizers. We inform them about agricultural loans that can be taken from banks. We inform them about donations that others are willing to give. We connect farmers nation-wide and simply hope that we can make a difference. We are Agrico.

Thank You
